# 1 Smart and efficient, easy button attaching

Automatically identify the front and back sides of the button, each button feeding time is 0.5 seconds, about 120 times per minute, no need to put button and adjust position by manual, de-skilled, the efficiency is more than 3 times higher than manual button feeding; No need skilled workers, easy sewing.

One set automatic button attaching machine equals 3 workers workload

## 2 Different buttons, quick adaptation

To switch buttons of different sizes, you only need to put the button in the detection position, it will automatically adjust the track of button feeding and the position of pressing button, simple and convenient.

## 3 Anti-collision function, safe and secure

With pedal and needle broken protection, the device will not run even if the pedal is stepped on by mistake during the process of button feeding. The device stops feeding button when the machine head is attaching button, to prevent broken needle from hitting finger, improve efficiency and ensure safety.

## 4 One key operation, Press adjustment

When meet the condition of defective button or fly button, press the button compensation key to replace it quickly; after the fault alarming is eliminated, press the reset button to standby mode and restart button attaching.

## 5 Wide adaptability and strong applicability

Match with JK-T1903G or JK-T373G machine head, it can be assembled into JK-T1903GR and JK-T373GR automatic button feeding and button attaching machine, which solves the trouble of manual button placement by operators and greatly improve button attaching efficiency.

## Technical parameter

Model	rated button attaching speed (pcs/8h)	Continuous button feed speed (pcs/8h)	Buckle feeding stability	Button diameter (mm)	Button hole thickness (mm)	supply voltage	Rated power	Volume (mm)	Weight (mm)
JK-T988A	19500-23500	29000-31500	99.7%	8-25	1-5	220VAC/50Hz	65W	670×550×400	37.5/43
